

Clear Aligner Course for General Dentists.

Exclusive course brought to you by CandidPro and Patterson Dental.

Gain practical learning for how clear aligner therapy can be predictable, efficient, and profitable for your practice, while transforming the smiles of your patients and enhancing their overall health.

LECTURER

Ben Miraglia, DDS

VP of GP Clinical Education

Dr. Miraglia has been practicing dentistry in Mt. Kisco, NY for 29 years, including 19 years offering interceptive orthodontics. He is widely recognized for his lectures and continuing education courses focusing on clear aligner therapy and craniofacial growth and development related to sleep-disoriented breathing.

COURSE DETAILS

CandidPro is proud to partner with Patterson Dental to help general dentists dive deeper into the world of clear aligners and digital dentistry with confidence.

Orthodontics is about more than just giving our patients great smiles. The ability to confidently move our patients' dentition can help us improve restorative outcomes, avoid invasive procedures, and even enhance their overall health. Unfortunately, most dentists do not receive applicable orthodontic training in dental school.

If you are ready to transform clear aligner treatment within your practice, we will show you how.

WHAT WE WILL COVER

1. Leveraging an orthodontist for case selection and predictable treatment planning
2. How to incorporate clear aligners into your workflow
3. Understanding the role of clear aligners in a general practice
4. How to properly screen and diagnose malocclusion
5. Using a bite health evaluator
6. Examples of how clear aligner therapy can help patients
