

Advancing Periodontal Care with the 9.3-Micron CO₂ All-Tissue Laser

Periodontal disease affects nearly half of U.S. adults — and yet many general dentists continue to refer these cases out due to the complexity and invasiveness of traditional treatments. In this CE webinar, Dr. Jeffrey Rohde shares how the 9.3-micron CO₂ all-tissue laser can transform the way you approach periodontal care.

Dr. Rohde will introduce a new application that leverages the 9.3-micron CO₂ laser to simplify the treatment of periodontal disease.
